```
[3]: import numpy as np
import pandas as pd
df = pd.read_csv('weather_data_1.csv')
df
```

```
[3]:      day  temperature  windspeed  event
0  1/1/2017           32           6    Rain
1  1/2/2017        -99999           7    Sunny
2  1/3/2017           28        -99999    Snow
3  1/4/2017        -99999           7  no event
4  1/5/2017           32        -99999    Rain
5  1/6/2017           31            2    Sunny
6  1/6/2017           34        -88888  no event
```

0.1 replacing miscellaneous values with nan using numpy

```
[4]: df.replace(-99999, np.nan)
```

```
[4]:      day  temperature  windspeed  event
0  1/1/2017         32.0          6.0    Rain
